DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (g)(1) during the course of an interference conducted under section 135 or section 291, another inventor involved therein establishes, to the extent permitted in section 104, that before such person's invention thereof the invention was made by such other inventor and not abandoned, suppressed, or concealed, or (2) before such person's invention thereof, the invention was made in this country by another inventor who had not abandoned, suppressed, or concealed it. In determining priority of invention under this subsection, there shall be considered not only the respective dates of conception and reduction to practice of the invention, but also the reasonable diligence of one who was first to conceive and last to reduce to practice, from a time prior to conception by the other.
- 2. Claims 1-4, 6-7, 9-10, 12-13, and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Hsiao (MIT M.S. Thesis, 2001).

Hsiao teaches of a receiver with a quadrature design (page 19, ¶ 2-3).

Hsiao teaches of a plurality of inputs and correlating inputs such that "To this end, we constructed a ringdown tag reader and a swept-frequency tag reader, both capable of real-time continuous interaction with multiple tagged objects" (abstract).

Hsiao teaches of source inactivity during sensing such that "The ringdown reader has two responsibilities; it must transmit a magnetic pulse ("ping"), and then it must stop that pulse and listen for a response from a tag" (page 14, \P 3).

Hsiao teaches of time-averaging the inputs (page 22, ¶ 1).

Art Unit: 3737

3. Claims 14 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Sieler et al. (Phys. Med. Biol. 45 (2000) N103–N110).

Seiler et al. teaches of tumor localization using magnetic tracking (abstract & Figure 1).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 5, 8, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hsiao (MIT M.S. Thesis, 2001).

Hsiao teaches of a "sine wave oscillator" (page 28, ¶ 2) but does not teach of using a triangular wave. The disclosure of the instant application teaches that other waveforms can be utilized (13, ¶ 1). Therefore it would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains to use the triangular waveform with the Hsiao positional marker system.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ashish S. Jasani whose telephone number is 571-272-8025. The examiner can normally be reached on Mon. - Fri. 9:30 am - 3:30 pm.

Application/Control Number: 10/749,478 Page 4

Art Unit: 3737

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on (571) 272 - 4956. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
